Laravel Herd y cosas que no estan documentadas.

Introduccion

El cambio de Laravel Sail a usar Laravel Herd en MacOs, tuvo su mas y sus menos. Aqui dejo unos tips que fueron saliendo.

Redis

```
Your requirements could not be resolved to an installable set of packages.

  Problem 1
    - Root composer.json requires PHP extension ext-redis * but it is missing from your
system. Install or enable PHP's redis extension.

To enable extensions, verify that they are enabled in your .ini files:
    - /opt/homebrew/etc/php/8.2/php.ini
    - /opt/homebrew/etc/php/8.2/conf.d/ext-opcache.ini
You can also run `php --ini` in a terminal to see which files are used by PHP in CLI mode.
Alternatively, you can run Composer with `--ignore-platform-req=ext-redis` to temporarily
ignore these required extensions.
```

Bien, uso DBngin y no hay problema con Redis.

La solusión con Homebrew es sencilla.

Necesitamos instalar en la versión de PHP que estemos necesitados de redis, la extension via pecl. (Se entiende que ya tenemos instalado redis como servidor)

```
 /opt/homebrew/opt/php@8.2/bin/pecl install redis

downloading redis-6.0.2.tgz ...
```

```
Starting to download redis-6.0.2.tgz (365,966 bytes)
............................................................done: 365,966 bytes
43 source files, building
running: phpize
Configuring for:
PHP Api Version:         20220829
Zend Module Api No:      20220829
Zend Extension Api No:   420220829
enable igbinary serializer support? [no] :
enable lzf compression support? [no] :
enable zstd compression support? [no] :
enable msgpack serializer support? [no] :

build-abkrimKX1ljZ/install-redis-
6.0.2/opt/homebrew/Cellar/php@8.2/8.2.13/pecl/20220829/redis.so

Build process completed successfully
Installing '/opt/homebrew/Cellar/php@8.2/8.2.13/pecl/20220829/redis.so'
install ok: channel://pecl.php.net/redis-6.0.2
Extension redis enabled in php.ini
```

Eso es todo.
