

Truncate index

Truncate index.

Reindexacion conservando el mapping

No probado.

```
$client = ClientBuilder::create()->build();

// Crear un nuevo índice temporal
$tempIndex = 'temp_index';
$client->indices()->create(['index' => $tempIndex]);

// Reindexar desde el índice temporal al índice original (sin documentos)
$response = $client->reindex([
    'body' => [
        'source' => [
            'index' => $tempIndex
        ],
        'dest' => [
            'index' => 'nombre_de_tu_indice'
        ]
    ]
]);

// Eliminar el índice temporal
$client->indices()->delete(['index' => $tempIndex]);
```

Borrado y receacion

```
$client = ClientBuilder::create()->build();
```

```
// Eliminar el índice  
$client->indices()->delete(['index' => 'nombre_de_tu_indice']);  
  
// Recrear el índice  
$client->indices()->create(['index' => 'nombre_de_tu_indice']);
```
